HTML Canvas Car Racing game Project:

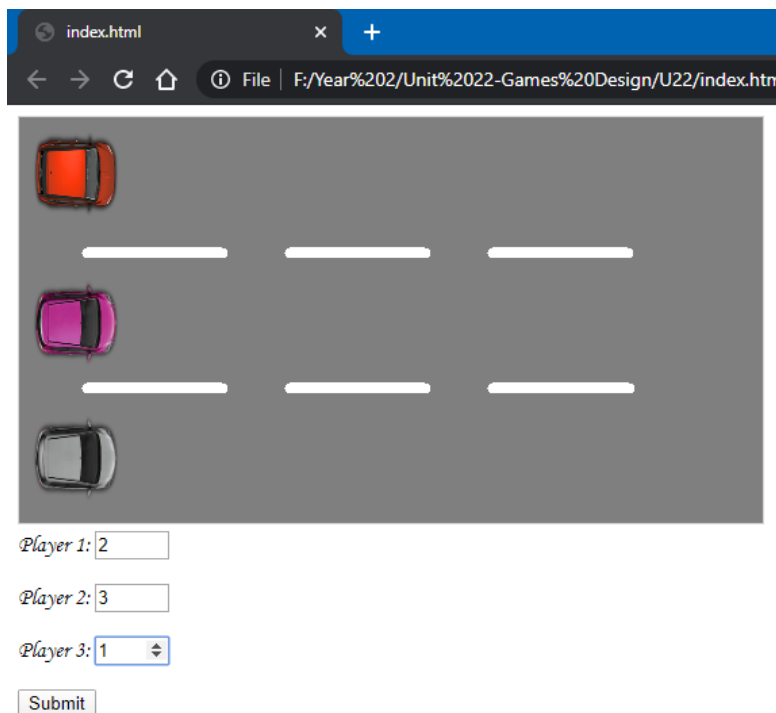

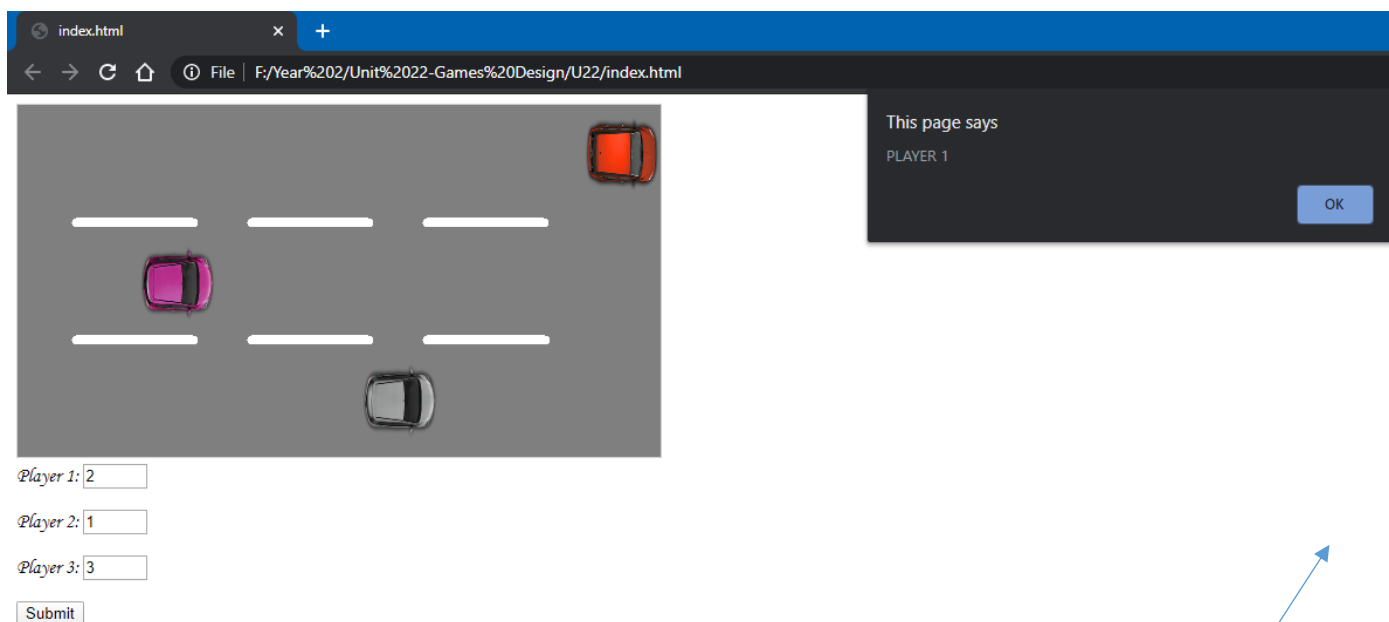

The game will start after the user has typed the car they would like. The game will not run if two users pick the same car. Each user must have a different car.

Once the user has picked their car, all 3 cars will race at random speeds and the first one to the finish wins. So, in the above screenshot player 1 has picked car 2, player 2 has picked car 1 and player 3 has picked car 3. All the 3 cars have raced and car 1 has won and that has been confirmed in a pop up box.
